Vishw Vekariya

Los Angeles, CA (Open to Relocate) | (213)-773-8436 | vishwvekariya@gmail.com | LinkedIn | GitHub | Portfolio

Summary

Data engineer and UCLA Anderson MSBA candidate with production experience building ETL pipelines and Postgres/Supabase data platforms at LinkedIn scale, spanning AWS, GCP, and Azure. Skilled at turning messy multi-source data into reliable infrastructure, with a strong side in ML and LLM/agentic AI systems (RAG, LangGraph, multi-agent pipelines).

Education

UCLA Anderson School of Management — Los Angeles, CA
Master of Science in Business Analytics (MSBA) — *Dec. 2026*

Sardar Vallabhbhai National Institute of Technology (SVNIT) — Surat, India
Bachelor of Technology in Computer Science and Engineering — *Jun. 2025*

Experience

Capex Funds — Jun. 2026 – Present
AI Data Engineer — *Los Angeles, CA*

- Owned the **full data platform** behind an investor matching product: a **four-layer PostgreSQL warehouse** on Supabase spanning 39 tables and 2.6M rows, including an entity resolution pipeline in Python and SQL that collapses 774K multi-source records into a canonical graph of 554K people and 169K organizations with per-record match confidence.
- Designed a **cascading net worth estimation model** that moved coverage from **15% to 100%** of 554K people using SEC Form 4 holdings, Form D equity and dilution-aware ownership, then layered a web-grounded **LLM** enrichment service (DeepSeek with Tavily and Serper) with source-tier grading and hallucination guardrails to replace placeholder estimates with verified figures.
- Built an **investor propensity model** over 15 weighted features that lifted recall from **51% to 69%**, recovering 14K known investors and surfacing 27K new candidates with no additional data spend, and hardened the production backend behind it with row-level security on 24 tables and identity-checked RPCs that closed a cross-tenant leak.

MAQ Software / LinkedIn — Jan. 2025 – Jun. 2025
Associate Software Engineer - Data Engineer — *Noida, India*

- Built **production ETL pipelines** using **Airflow DAGs, Scala, and PySpark** for the **LinkedIn Flagship Backend** team, automating recurring data workflows and achieving a **97%** job success rate.
- Stabilized **20+ critical pipelines** by improving **failure handling** and operations workflows; integrated **AWS** services (**S3, CloudWatch, EventBridge**) to support observability and shift data availability to morning-ready, improving report accuracy by **15%**.
- Implemented an **MLflow audit system** for predictive maintenance models, rolling back buggy updates **95%** faster with **Power BI dashboards** on **Snowflake**, improving trust and traceability for downstream ML/analytics consumers.

Reliance Industries Ltd. — May 2024 – Jul. 2024
Software Engineer Intern — *Mumbai, India*

- Enhanced a high-volume Visitor Management System using **Angular** and **Spring Boot** supporting **10,000+ daily visitor entries**, and built an **OpenCV** data-capture module automating visitor information extraction with **98% accuracy**.

Techs Network — May 2023 – Aug. 2023
Machine Learning Intern — *Bengaluru, India*

- Developed Python data pipelines for preprocessing and feature engineering; built and evaluated models with **TensorFlow** and **XGBoost** reaching **95% accuracy**, and accelerated an **LSTM** forecaster for a **12% improvement** in prediction accuracy over baseline.

Projects

Starbucks Product Recommender | *Python, OpenAI, LangChain, Pinecone, Embeddings* — **1st Prize**

- Won **1st prize** at the **UCLA Anderson Starbucks Data Challenge**; built a semantic search pipeline (LLM constraint extraction → OpenAI embeddings → **Pinecone** cosine retrieval) achieving **84% NDCG@10**.

Fourth-Down ETL — NFL Decision Analytics | *PySpark, Airflow, GCS, Snowflake, SQL, Tableau*

- Built a production medallion **ETL pipeline** (Bronze→Silver→Gold) ingesting 16 NFL datasets via **PySpark** on **GCS + Snowflake** with atomic rollback; delivered interactive **Tableau** dashboards on play-calling patterns.

SeeWeeS Ops Reporting Agent | *Python, LangGraph, LangChain, ChromaDB, RAG*

- Engineered a **7-node LangGraph multi-agent system** with parallel fan-out execution and a **RAG pipeline on ChromaDB**, layered with a two-stage deterministic audit; validated by **29 passing unit tests**.

Skills

Languages: Python, SQL, Scala, R, Java, C/C++, JavaScript
Data Engineering & Cloud: Airflow, PySpark, Kafka, Hadoop, Hive, ETL/ELT, AWS (S3, Glue, EC2, CloudWatch, EventBridge), GCP (GCS, Composer, Dataproc), Azure, Microsoft Fabric, Databricks
Databases & Warehousing: PostgreSQL, Supabase, Snowflake, MySQL, SQL Server, MongoDB, DuckDB, Schema Design, Data Modeling, Indexing, Data Quality
ML & Gen AI: Scikit-learn, TensorFlow, PyTorch, XGBoost, NLP, Time Series Forecasting, LangGraph, LangChain, RAG, Pinecone, ChromaDB, Hugging Face, Prompt Engineering
BI & Tools: Power BI, Tableau, Git, Docker, Linux, VS Code
